Abstract

The EU is highly dependent on import of many raw materials and the EU has taken important measures on raw materials cause its special significance to the stability of economy. Many of the EU's activities need to take into consideration the China role on the global commodity market since China is the most important producer of many materials. Besides, China and the EU also conduct several trade disputes under the WTO, which concluded that China really matters to the EU's green energy policy and high-tech policy.
